FEATURES [Print](#)

### Self-Diagnosis Mode

The unit's self-diagnosis mode alerts users to malfunctions straight away. An error code and LED light enable engineers to identify the problem quickly, reducing the time taken to fix it.

### Auto Surround Swing

The innovative Twin Cross Flow Fan distributes cool and warm air even further with a minimum of noise. This efficient system suits rooms of any dimension so no corner is overlooked.

### Ideal for Long and Narrow Places

When indoor space is at a premium, the 2 Way Cassette is an ideal solution, particularly in long narrow areas such as hallways and corridors. As it is 45 per cent smaller than previous units, and requiring 30 per cent less room than the 4 Way cassette, it is easily incorporated into existing or planned building designs. Conveniently slotting into standard ceiling grids, the result is a discreet air conditioning system which offers maximum performance with minimum visual impact on decor.

## Optimum Temperature Control

Businesses benefit from a regular climate throughout the entire room with the Optimum Temperature Control feature. This function detects the temperature at the top and bottom of the area, then acts to minimise the difference maintaining optimum levels all around the room. As a result, hot and cold spots are eliminated, creating more balanced, comfortable surroundings.

### Powerful Airflow

The 2 Way Cassette's wide blades create powerful airflow without wasting energy. Removing the need for multiple appliances, the indoor unit delivers cool or warm air at greater distances, making it more efficient for businesses. Providing even cooling and heating throughout the room, the 2 Way Cassette delivers optimal results, even in the remotest corners of the space.

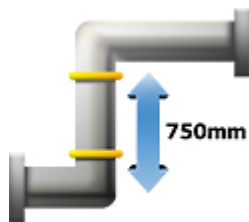

### Ceiling Dust Prevention

Dirty ceilings are no longer an issue with the 2 Way Cassette air conditioning unit. The newly designed panel prevents dust from gathering over long periods of operation. By controlling the direction of the airflow so that it avoids contact with the ceiling, businesses can enjoy cleaner and more elegant work spaces than ever.

### High Lift-Up Drain Pump

The 2 Way Cassette includes an optional high lift-up drain pump. This lifts condensed water up to 750 mm compared with previous 700 mm limits. The increased quantity provides more flexibility over

where the unit is installed, offering users greater convenience than ever.

### No Overflowing Drain Water

The innovative drain pump check valve prevents drained water from flowing backwards into the drain pan. Minimising the drain pan's water level in this way means businesses never have to worry about water stagnation or overflows that drip into indoor spaces. The 2 Way Cassette provides fresh, clean air without contaminating the room.
